

STANDARD FEATURES:

- Fully stainless steel construction
- Quick release highly efficient submersible polyurethane pump
- PLC Controller for the following...
 - Blast Cycle Times
 - Rinse cycle times
 - Water temperatures
 - Drain valve opening & closing
 - Windscreen wiper & rinse

Aquablast Front Loading Tumbler Machine

Vixen's front loading Aquablast tumbler machine range is designed to finish batches of components using the wetblast process automatically. The machine operates using a PLC controller. This controller is programmed with the various functions so as to produce a consistent finish on batches of components. Various drum designs are available as well as rinse options.

PRINCIPLE

The Aquablast/wetblast principle uses a mixture of abrasive and water which is propelled to the blast gun. This 'slurry' is then accelerated using compressed air and on impact with components to be cleaned the slurry can lightly degrease (if an additive is used in the water) and also produce a uniform finish on the components being blasted automatically.

OPTIONAL EXTRAS

- 1 or 2 stage rinse
- Unload facilities
- Additional blast guns
- Hot rinse
- Demineralised rinse
- Cycle Indicator
- Touch screen controls
