Jet Air Suction Blast - Abrasives Blast Cleaning

Jetair is the top of the range of Vixen's industrial handblasting cabinets. The halogen lighting and high performance dust collection system fitted to these models ensures maximum internal visibility, which is important for first class results. These cabinets are designed to provide quick, clean and efficient results across a wide range of blast cleaning applications. The range includes many size options in addition to flexible machine specifications including cartridge filters, media cyclone reclaimers and turntable options. All Vixen machines can be easily converted to pressure using our minipot, increasing performance of suction blasting by up to 4 times. This unit simply slides onto the base of the machine hopper and takes only a few minutes to fit. Being only a small capacity unit the benefits of the minipot are that it can operate quite effectively with low compressed air volumes.

STANDARD MODELS AVAILABLE

WIDTH	DEPTH	HEIGHT
VM30	- 760mm	660mm 680mm
VM36	- 920mm	760mm 760mm
